EFUDEX TREATMENT **INSTRUCTIONS**

(Generic is called 5- fluorouracil cream)

How to Use:

Apply a thin coating to the affected area(s) twice daily for three weeks.

*Please note that the treated areas will become red and crusty. That is a normal response and indicates that the affected regions are responding properly.

After completing the three weeks of treatment, please take a selfie of the area(s) to bring to your appointment. Your provider will want to take a photo of the results for your chart. Once you have finished your course of Efudex, you may apply either Vaseline or Aquaphor to the area(s), which will help with the healing process.

If this medication will cost you more than \$100, please call the office so that we can find you a more cost-effective alternative.
